art

The Planning Center's Landscape Architecture division has the knowledge, vision and resources necessary to plan, design, and provide construction related services to all aspects of a roadway design project. By creating people oriented pedestrian nodes, using way-finding devices, and working with artists to integrate public art into roadway features, our professionals work to create a sense of community. In addition to incorporating this community sense in every roadway project, we also remain at the forefront of incorporating water harvesting techniques to ensure we minimize the use of supplemental irrigation in roadway plantings.
